

About us:

V-sion Tech International pioneers the convergence of new age technology, expert software engineering, sustainable energy solutions, and advanced telecommunications infrastructure to build a fully connected, intelligent, and sustainable world. We specialize in leveraging cutting-edge innovations like AI, IoT, and cloud computing to transform traditional industries and empower our partners to future-proof their businesses through digital transformation. Formerly operating as Fiber Direct (PTY) LTD, established in 2015. Our experience and focus were being inclined on network design, implementation, and maintenance for multiple fiber network operators in the SADC region. Rebranded as V-sion Tech International, we are excited to announce that we are evolving our business to better serve you. With the digital world taking an accolade of evolution, our core objective is to enable sustainable embrace of AI, IoT, and cloud computing as well as establish the required infrastructure to support the new age technology across Africa and the world at large

Vision

To be the leading architect of a future where technology and energy infrastructure unlock human potential

Core Focus Areas

New Age Technology & Software Engineering: We design, develop, and integrate custom software solutions that leverage emerging technologies. Our expertise extends to the entire development lifecycle, from strategy and design to deployment and maintenance, ensuring robust and scalable platforms.

Energy Solutions: We are committed to a cleaner, more efficient future by developing and implementing smart, sustainable energy solutions. Our software enables advanced energy management (AEM), smart grids, and the integration of renewable sources like solar and wind power, helping commercial partners reduce consumption and operational costs.

Telecommunications Infrastructure: We provide essential network components and intelligent software for telecommunications, enabling high-speed, reliable connectivity (including 4G, 5G, and VoIP). Our solutions optimize network operations, enhance customer experience management (CEM), and facilitate the automation of complex IP service deployments.

MISSION

"To be the leading provider of innovative ICT and energy solutions that enhance the efficiency and sustainability of our clients' operations, while delivering exceptional value and a seamless customer experience".
